|  Prevents cavities & removes mouth odor |  Prevents periodontal & gum disease |
|  Improves aesthetic effect |  Removes and prevents plaque |

HAP (Hydroxyapatite)

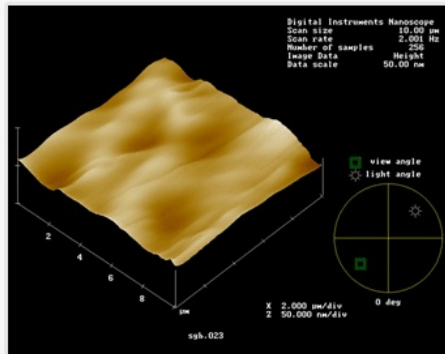

Hydroxyapatite is the substance comprising 60% of human bones and 97% of the enamel layer on teeth, serving to protect the teeth. Enamel layers are gradually eroded from alcohol consumption, smoking, brushing and natural causes, with defective layers causing discoloring & sensitive tooth. Dio toothpaste contains HAP ingredient to help repair damaged enamel layer for healthy teeth. Replaces the exposed enamel layer erosion caused by brushing.

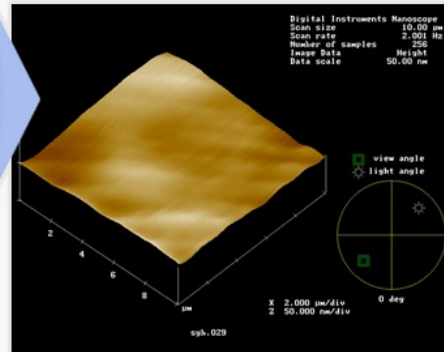

Gyeongbuk University Clinical Case Study

DIO toothpaste containing high-purity HAP, as seen through the AFM 3D,
Tooth enamel restoration clinical study (Gyeongbuk University Preventive Dentistry Class)

After 4 weeks of using Dio toothpaste, damaged tooth surface (enamel) is restored to smoothness.

No Treated

After 4 weeks
